

In Goshen the sidewalks are very bumpy. Every step you take there is a big bump. Lots and lots of people get really hurt and sometimes they break their ankle. This is a problem. We should do something about this. If we don't act now more people will be harmed, and who knows how bad it can get.

People pay very good money to live in Goshen because in a couple of the tax money has gone up. Half of that money should go to the sidewalks so people can walk instead of getting hurt. The sidewalk should be fix so people will be fix and people will be happier.

People try to enjoy their life. Now, would you want to go for a walk? Do you want to get hurt .Of course you wouldn't want to get hurt. People live in the village you create for them. You make it better for the people that live in Goshen. Now you can make a different, you can dig up the sidewalks and put in black top and/or put down cement. You can make a different.

Well now I told you about my bill. Well I guess now all you have I have to wait. Well I hope it becomes a law. So if you were wondering how this could work you just dig up the rocks and put down cement and/or black top. So that in the future it doesn't get worse. So people don't get hurt. Or more hurt then they are now.
